

This project helped address an eroding slope along the south-facing side of our greenhouse. Water running off the greenhouse roof was washing soil away, encouraging weeds to grow, and providing insect pests with a way into the greenhouse. A retaining wall was built and filled with native sedges and other plants that will not only help prevent erosion but will create habitat for native pollinators and beneficial insects. The landscape will also be used to showcase plants local home gardeners may want to consider for their own landscapes.

Funding and Costs

Square Footage Impacted by Greener Towns	Volunteers	Plants Planted	Project Value
750	12	228	\$2,285.62

Species Highlights

Husker Red Penstemon
Oenothera 'Fremontii'

October Skies Aster
Symph. 'October Skies'

Prairie Dropseed
Sporobolus heterolepis

Green Infrastructure Impact

- Use native and well-adapted plants to address erosion control issues.
- Create habitat for pollinators and beneficial insects that will help lower the insect pest pressure within the greenhouse.

Partners

- PlantNebraska
- North Platte NRD
- Local volunteers
